Hello. I need to program a app for the Phone that can send Pic and dokuments from the Phone to the Pc. I work in acounting the purpose is clients send in material and I get them in a file. Both me and the client need to get acces to those.

If we can make it hallen we can talk further.

Hello Denveer,

Thanks for choosing me to help you.

Do you have any reference similar to your idea?

Let me know your valuable thoughts.

Looking forward to hearing from you.

Home Page / Dashboard:
An overview where users can quickly see their folders and files. There should also be a button to upload new files.
A search function to easily find specific files.
Folder Management:
Users should be able to create, rename, and delete folders to organize documents.
A list of all folders with the option to filter by date or period.
File Management:
Users can upload, view, and download files.
Clicking on a file will show details, allow downloading, or allow adding comments.
Comments and Notes:
Each file can have a section for comments. Users can add notes or leave feedback on files.
Version History:
When a file is updated, users can view previous versions and any comments added to the file.
Settings and Account Information:
Users can change their password, manage email settings, and log out.
The design should be simple with clear buttons and a clean layout. Colors and icons can be minimalistic to keep the focus on functionality.
